

NetManager

visioprime
INTELLIGENT VIDEO PROCESSING

- The full functionality of a Visioprime system on a remote client.
- Display of up to 16 cameras, from multiple systems across your network, in playback or live mode.

NetManager is a client application programme that enables users to connect to multiple FX/FXL systems across a local or wide area network and remotely:

- Monitor live video and audio inputs
- Playback recordings
- View mixed live and recorded images on the same screen
- Modify the system's configuration without interruption of service

The NetManager user interface has the same look and feel as the Visioprime system GUI, providing similar functionality and the same simple to use family feel of all of our software applications.

NetManager can be supplied as software only or as part of a client machine package complete with all the required hardware.

NetManager Lite is a freely supplied version with reduced functionality, which enables users to connect to Visioprime systems for live viewing and playback, but not configuration.

NetManager provides the full functionality of the Visioprime system to a remote client affording display of up to 16 cameras, from multiple systems in playback or live mode. With NetManager a user can connect to and configure any system on a local (LAN) or wide area network (WAN). Configuration changes take immediate effect and the system's recording or other operations are not affected.

With the Bi-Directional Audio option, users of NetManager can transmit live audio via the system to an external speaker. If the associated camera also has audio input, a two-way conversation is possible, with people in the monitored location.

NetManager can simultaneously playback up to 16 different recorded video streams from systems on a LAN or WAN. Detailed viewing of a scene can be achieved by using the freeze-frame and single frame advance controls with Fast Forward and Fast Reverse enabling easy video search. Recorded video can be searched for specific periods by date and time, for contact alarms or motion alarms.

NetManager can export recordings consisting of both video and audio to external media such as CD or DVD (appropriate CD/DVD authoring software is required for this function**). The export utility enables users to export the sPlayer video playback tool with the video clips onto the blank media, allowing exported clips to be played on any Windows based PC.

BENEFITS

- Same easy to use GUI
- Remote monitoring of system's live video and audio
- Remote playback of system's recordings
- Remote configuration of system without interruption
- Control PTZ cameras
- Password-protected login
- Powerful event search tool
- Bi-Directional Audio
- Mix live and recorded channels on one screen
- Export of data and sPlayer to CD and DVD & USB Storage

NetManager

Visioprime can supply you with a client machine that includes all the hardware and software to let you exploit the full functionality of the NetManager application. If you wish to purchase NetManager as a software only option, consult the following table for the specification of the client platform.

CLIENT HARDWARE & SOFTWARE SPECIFICATION	RECOMMENDED
CPU	2.4 GHz P4 533MHz FSB
RAM	512 MB
Ethernet	Gigabit
HDD*	80GB, 7200RPM
Graphics Card	1024 x 768 @ 16 bit colour
Sound card	AC'97 Compatiable
Operating System	Windows XP Professional
Additional software**	Ahead Nero v7

* Export to CD or DVD requires the equivalent amount of free space on the hard disk.

** Ahead Nero v7 - required for export to burnable media
